

NEHORAI HADAD

AI ENGINEER | FULL STACK DEVELOPER

SUMMARY

AI engineer with 7+ years in on-prem infrastructure and datacenter operations and 4+ years in software development. Builds production agents, retrieval systems, automation, and full-stack products with an operator's eye for reliability.

EXTERNAL VALIDATION

Reported an authorization issue in [NousResearch/hermes-agent #87830](#), confirmed in about 72 minutes and credited in [open PR #87885](#). Also contributed [merged OpenClaw PR #107209](#) to suppress model fallback notices in group conversations.

SELECTED WORK

Maane | Hebrew-first knowledge agent | [maane.app](#)

- Production WhatsApp + web agent with retrieval grounding, a grounding judge, one refine round, deterministic forbidden-topic gate and controlled tool loop.
- Content-hash and model-aware indexing with atomic claims, debounced turn batching and idempotent delivery; QA across multi-turn, distractor, media and answer-language suites.

Podcasto | AI podcast product | [podcasto.app](#)

- Shipped and in production: a web product for creating and consuming AI-assisted podcast content.

Agendo | Self-hosted agent control plane

- Orchestrates Claude, Codex, Gemini, Copilot and OpenCode through MCP task and sub-agent workflows.

nehorai-plugins | Published TypeScript packages

- Published [@nehorai/credits v2.0.0](#): framework-agnostic reserve, commit/release and audit-journal flows.

EXPERIENCE

Fullstack & AI Developer | Nemesh 2025 – Present

- Builds full-stack applications, AI agents and automation with React, Next.js, Node.js and Python; built a RAG proof of concept with pgvector and Qdrant.

Full Stack Engineer | STARTICA LTD 2024 – 2025

- Built a Flask/JavaScript automation hub, Cisco firmware pipelines, Outlook-integrated shift tooling and ghost-server detection.

Datacenter Administrator | STARTICA LTD 2023 – 2024

- Managed secure datacenter operations and built Python/Flask automation for Cisco firmware and hardware lifecycle workflows.

Datacenter Administrator 2016 – 2023

M.S.R Engineering & Development | IAF environment

- Began as an IAF soldier and continued in the same environment as a civilian employed by M.S.R Engineering & Development, the contractor.
- Operated large-scale military datacenter infrastructure spanning thousands of servers, with server configuration and lifecycle work at the core and hands-on responsibility for networking and storage equipment.
- Used ILO, OA, IMM and CIMC to install, configure and support mission-critical Cisco, HP and IBM systems, carrying production reliability from physical deployment and cabling through ongoing operations.
